The Multi-Paint-System for Industry and Craft

Paint suppliers are faced with the increasing demand of industry and trade to supply products according to individual quality needs as to colours, gloss degrees, surface textures. Furthermore customers require "just-in-time" deliveries of a variety of quantities ranging from very small to large volumes. The solution to meet these demands is **Pro Mix® Industry**, the Multi-Paint-System.

With **only a few system components**, that bring stock levels down to a minimum, all common industrial primer and topcoat qualities, single or two-component, with most different gloss levels and textures for all common kinds of application like brushing, rolling or spraying are made available. With pigment pastes, which are universal in use, the different base qualities are tinted exactly to the required colour shade.

Quality + Price

As the tinting takes place by adding the pigment pastes in ready prefilled cans the packing costs are reduced to a minimum. Exact dosing of the pigment pastes is done manually or by a automatic dispenser. Every formulation is optimized in quality, hiding power and price.

Especially the use of the fully automatic tinting machine combined with the formulation software Pro Mix® Industry including the cost calculator results in high production speed and dosing accuracy. Besides the prefilled standard cans certainly also other tin sizes can be used.

Perfect Paint-Management

- Customized products
- Few system-components
- Pigment pastes for universal use
- Perfectly adjusted
- Automatic tinting
- More than 80 qualities from one system
- Thousands of colours

The qualities and products of Pro Mix® Industry open up new horizons.

The qualities of Pro Mix® Industry appeal to a wide clientele. Paint consumers focusing on engineering, general industries, vehicle construction, structural steelwork as well as on paint and varnishing trade with applications such as renewal of metal facades and painting of plastic windows will find all the necessary products.

The flexibility and the delivery speed of Pro Mix® Industry system with minimum inventory as well as its high colour accuracy and the application quality of these products open up new horizons.
